```
Expressed at low level throughout development, including somatic tissues. First apparent early in oogenesis, in the cytoplasm of stem cells and mitotically dividing cystoblasts. In regions 2a and 2b of the germarium, it is most concentrated in the center of the germline cysts, where the pro-oocyte is located. In stage 1 and early stage 2 egg chambers, it accumulates at the anterior of the cocyte, near the ring canals. It also extends through the ring canals forming a branched structure that links the early oocyte with adjacent nurse cells. In stage 3 cysts, it accumulates at the posterior cortex and localizes to extensions that pass through the cocyte into the nurse cells. Through stages 4 to 7, it continues to be somewhat enriched at the posterior cortex of the oocyte, but at significantly lower level. In stage 9 to 10 egg chambers, it is found throughout the cytoplasm of the oocyte and nurse cells, with slight enrichment at the oocyte cortex.

SIMILARITY: Belongs to the DNA2/NAM7 helicase family. SDE3

"RISC assembly defects in the Drosophila RNAi mutant armitage.";

Cell 116:831.841(2004).

-I- FUNCTION: Probable RNA helicase required for axial polarization of
the occyte during early and mid cogenesis. Plays a central role in
RNA interference (RNAi) process, a process that mediates mRNA
destruction of translational repression. Required for the assembly
of the RISC complex, a complex required for target RNA destruction
or repression. May be required in the RISC assembly to unwind
miRNAs, in the production of single-stranded miRNA from the
double-stranded miRNA, a key step in RISC formation. Required both
for the translational control of oskar (osk) mRNA and cytoskeletal
                                                                                                                                                                                                                                                                                                            use by non-profit institutions as long as its content is modified and this statement is not removed. The highest expression is in the region that will give rise to the ventricular segments. At E9.5, the ventricular expression is maintained in the looped heart tube. In

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         nonsense suppression, by contacting modulator of translation termination (MTT1) also referred to as helicase B (HCSB) in Saccharomyces cerevisiae. The method is useful for identifying compositions or agents which increase nonsense suppression. The invention may also be used for antiviral therapy and for suppression of pathological nonsense mutations. The present sequence is Saccharomyces cerevisiae motif peptide
                                                                        Identifying a test composition or agent that modulates the efficiency of translation termination comprises contacting the MTTI with the test composition or agent, and determining if the test composition or agent
                                                                                                                                                                                                                                                                                                                                                                                                                       Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Misc-difference

It is also useful to screen for drugs involved in peptidyl transferase activity during translation, inhibiting the competidyl transferase activity during translation, inhibiting the competition of mitsense sequences) can be constructed and introduced into cells to interfere with complex expression and so modulate the efficiency of translation termination of mRNA and/or degradation of aberrant composition in the competityl transferase activity during translation termination of mRNA at a nonsense codon and/or promote degradation of aberrant compositions modulate peptidyl transferase activity during translation termination of mRNA at a nonsense codon and/or promote degradation of aberrant compositions modulate modulating binding to MTTI, useful to identify genes. Sequences AAY77804-812 represent motifs I-IX comprised in the genes of interest used for additating translation to identify genes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention provides a new multiprotein complex which can modulate peptidyl transferase activity during translation. The complex comprises the gene encoding Helicase B (HCSB; renamed MTT1, for Modulator of Translation Termination) and the conserved proteins known to interact and carry out translation termination in eukaryotic cells, peptidyl eukaryotic release factor (eRF) 1 and eRF3. The complex can be used to modulate peptidyl transferase activity during translation in a cell. It can be administered therapeutically combined with a carrier in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Helicase B; HCSB; MTT1; modulator of translation termination; eRF1; eRF2; eukaryotic release factor; peptidyl transferase; beta-thalassemia; beta-globin; Duchene/Becker Muscular Dystrophy; antianemic; yeast;

Translation Termination) and the conserved proteins known to interact and carry out translation termination in eukaryotic cells, peptidyl eukaryotic release factor (eRF) I and eRF3. The complex can be used to modulate peptidyl transferase activity during translation in a cell. It can be administered therapeutically combined with a carrier in pharmaceutical compositions to treat diseases associated with peptidyl pharmaceutical compositions to treat diseases associated with peptidyl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New multiprotein complex which can modulate peptidyl transferase activity during translation, useful to treat diseases associated with peptidyl transferase activity e.g. Duchene/Becker Muscular Dystrophy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              peptidyl transferase activity during translation. The complex comprises the gene encoding Helicase B (HCSB; renamed MTT1, for Modulator of Translation Termination) and the conserved proteins known to interact as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention provides a new multiprotein complex which can modulate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Example 1; Fig 1; 89pp; English.
```

CC transferase activity, especially diseases resulting from a nonsense or cc frameshift mutation e.g. beta-thalassemia, beta-globin, Duchene/Becker cc Muscular Dystrophy etc. It can be used to identify disease conditions ci involving a defect in the complex, by transfecting cells with encoding cc and after transferase activity during translation of defective complex before and after transferase activity during translation, inhibiting the peptidyl transferase activity during translation, inhibiting the complex or interaction between MTII and eRF3 or involved in enhancing translation cransisense sequences) can be constructed and introduced into cells to interfere with complex expression and so modulate the efficiency of cranslation termination of mRNA and/or degradation of aberrant cranscripts in a cell. Agents binding to the complex can be identified care also useful to modulate the efficiency of translation in cells. They are also useful to modulate the efficiency of translation termination of compositions useful as above, and/or used to compositions modulating binding to MTII, useful to identify genes. C compositions modulating binding to MTII, useful to identify genes. C compositions have a promote degradation of aberrant compositions modulating binding to MTII, useful to identify genes. C compositions have a promote a promote degradation of aberrant compositions modulating binding to MTII, useful to identify genes. 'n

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            increase nonsense suppression. The invention may also be used for antiviral therapy and for suppression of pathological nonsense mutations. The present sequence is Saccharomyces cerevisiae UPP1 (otherwise termed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a method of identifying an agent that increases nonsense suppression, by contacting modulator of translation termination (MTT1) also referred to as helicase B (HCSB) in Saccharomyces cerevisiae. The method is useful for identifying compositions or agents which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Identifying an agent that increases nonsense suppression, for antiviral therapy, by contacting modulator of translation termination (Mttl) in Saccharomyces cerevisiae with a test agent, and detecting specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Identifying therapy, by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Saccharomyces cerevisiae.

                                           the RNA helicase MTTI with a composition or agent under conditions compensation binding between the MTTI and the composition, detecting specific binding of the test composition or agent to the MTTI, and composition and methods are useful for modulating the fidelity of translation termination or for identifying agents that: affect the CC composition and methods are useful for modulating the fidelity of translation termination or for identifying agents that: affect the CC functional activity of mRNAs by altering frameshift frequency, permit committees and provide modulators (inhibitors/stimulators) of peptidyl transferase activity during initiation, elongation, termination and mRNA cogradation of translation. The agents, which may be antagonists or agonists, are useful in screening, diagnostic and therapeutic purposes, composition are useful in screening from or cause premature translation, such as beta-thalassaemia, beta-globin, Duchenne/Becker Muscular Dystrophy, Haemophilia A, Haemophilia B, Von Willebrand Disease, CC osteogenesis Imperfecta, Breast cancer, Ovarian Cancer, Wilms Tumour, in the composition of the prevent sequence represents controlesterolaemia, Retinitis Pigmentosa, or Neurofibromatosis, cc the amino acid sequence of the yeast helicase Upfl.
Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a method of identifying a test composition that modulates the efficiency of translation termination comprising contacting

New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.

WPI; 2004-061375/06

The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned provide for expression of a polynucleotide encoding a polypeptide from

is positioned to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a cc transformed plant having an improved property. The plant is a crop plant cc such as maize or soybean. The method of producing a transformed plant having an improved property comprises transforming a plant with the crecombinant DNA construct and growing the transformed plant, where the cc polynucleotide or polypeptide is useful for improving plant with the cc improved plant properties, e.g. improved cold, heat or drought tolerance, cc increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of content, improved yield by modification of carbohydrate, nitrogen or condition, improved plant growth and development under at least one stress condition. This sequence represents a bacterial polypeptide used in the growth of the printed specification or improved galactomannan cc growth of the printed specification but was obtained in electronic cc format from USPTO at segdata.uspto.gov/sequence.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The nonsense-mediated mRNA decay pathway has an important role in the CC degradation of mRNA transcripts that contain a stop codon. The products cof the UPF1 and UPF3 genes (proteins Upf1p and Upf3p, respectively) are CC essential components of this pathway. Mutations in these genes or CC inhibition of Upf1p or Upf3p function would lead to stabilisation of mRNA CC containing premature stop codons. The present sequence is the UPF1 CC protein, Upf1p, from Saccharomyces cerevisiae. The carboxy terminal of the NMD2 gene protein, Nmd2p, has been found to bind to Upf1p, leading to CC inhibition of the nonsense-mediated mRNA decay pathway. Inhibition of the nonsense mutations, e.g. breast cancer, polycystic kidney CC diseases, Niemann-pick disease, adenomatous polyposis coli, cystic CC diseases, Niemann-pick disease, adenomatous polyposis coli, cystic CC diseases, Niemann-pick disease, adenomatous polyposis coli, cystic CC glycogen storage disease, McArdla disease, polyposis coli, cystic CC diseases, Cowden disease, McArdla disease, polyposis cancer, Tay-Sachs CC disease, Cowden disease, Milson disease, polyposis kidney disease, Couchenne muscular dystrophy, adrenocortical carcinoma, Li-Fraumeni CC syndrome, Maple syrup urine disease, Turcot syndrome or beta-thalassaemia

relates to multiprotein complexes from

eukaryotes.

Proteins

of the invention and DNA sequences encoding them are given in records ABR52568-ABR53903 and ACC60610-ACC61944 respectively. The complexes are obtainable by using a protein as a bait and isolating the set of proteins which is attached thereto from cells. Such protein complexes may comprise up to 30 distinct proteins. Protein complexes of the invention are useful for diagnosing a disease or disorder, or as a target for an active agent of a pharmaceutical, preferably a drug target in the treatment or prevention of a disease or disorder. Note: The sequence data for this patent is not represented in the printed specification, but is based on sequence information supplied by the European Patent Office. The complete document is available on CD-ROM

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC proteins are selected from given protein complexes, which are not defined CC in the specification. The variants are encoded by nucleic acids that CC hybridize to the nucleic acids encoding the proteins under low stringency conditions. The protein complexes are useful as targets for an active useful as drugs targets for the treatment or preventing of a disease or CC useful as drugs targets for the treatment or preventing of a disease or CC disorder. The complexes and methods above are useful in disgnosing or CC screening for the presence of a disease or disorder or a predisposition CC for developing a disease or disorder in a subject. These are also useful in screening for a drug for treatment or prevention of a disease or CC disorder. The molecule that modulates the amount, activity or protein CC components of the complex is useful for the manufacture of a medicament CC for the treatment or prevention of a disease or disorder. This sequence CC corresponds to a protein of the invention. (Note: the sequence data for this patent did not form part of the printed specification but was CC obtained from the EPO in electronic format).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             describes an immunoassay to identify agonists and antagonists, as well as antibodies, antisense molecules and siRNAs that can all be used to bind to and modulate expression of the CDNA molecules. As such, these molecules are useful for diagnostic markers or therapeutic targets for the various diseases or morbid states. In particular, they are useful in gene therapy for treating osteoporosis, neurological disease, Alzheimer's disease, Parkinson's disease, dementia, short memory and various cancers, as well as for maintaining equilibrium of sense or motor function, and for treating emotional reaction, fear response and panic. Accordingly, they exhibit osteopathic, neuroprotective, nootropic, antiparkinsonian, cytostatic and tranquiliser activities. This polypeptide is a protein encoded by a full length human cDNA sequence of the invention. MOTE: This sequence is not given in the sequence listing of the specification but can be obtained on CD-ROM from the European Patent Office, Vienna Sub-
                                                                                                                                                                                                                                                                                                                                                                                                          New isolated regulators of non-sense-mediated RNA decay - used to develop products for the study, diagnosis and therapy of disorders such as Marfan Syndrome, accelerated ageing and cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RENT1; nonsense-mediated RNA decay; NMRD; mutation; regulator of nonsense transcripts; Marfan Syndrome;

Sequence 797

À

This protein sequence is a fragment of the human RENT1 protein which regulates nonsense-mediated RNA decay (NMRD). This fragment of RENT1 shows homology to the yeast Upf1p protein. The RENT1 (regulator of nonsense transcripts) protein and other products can be used in the study, diagnosis and therapy of disorders involving NMRD such as Mar Syndrome, accelerated aging or various cancers

NMRD such as Marfan

                                         CC altered mitochondrial function. Specifically, it refers to a method for ci identifying proteins of the human heart mitochondrial proteome that are consecutive invention describes a method for identifying proteins of the human heart mitochondrial proteome that are consecutive invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mediate, Huntington's disease, costeoarthritis, Leber's hereditary optic neuropathy (HAON), mitochondrial cencephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy ragged red fibre syndrome (MERRF) or cancer. Accordingly, these compositions have neuroprotective, nootropic, antidiabetic, anticonvulsant, antiarthritic, osteopathic, ophthalmological and cytostatic activities. This polypeptide sequence is a human heart mitochondrial protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches

                                                                                                                                                                                                           CC The invention relates to a recombinant DNA construct comprising a CC promoter functional in a plant cell, where the promoter is positioned to CC provide for expression of a polynucleotide encoding a polypeptide from a CC microbial source. The invention also relates to a transformed plant CC comprising the recombinant DNA construct and a method of producing a CC transformed plant having an improved property. The plant is a crop plant CC such as maize or soybean. The method of producing a transformed plant the having an improved property comprises transforming a plant with the CC recombinant DNA construct and growing the transformed plant, where the CC polynucleotide or polypeptide is useful for improving plant properties. The recombinant DNA construct is useful for producing plants with the CC improved plant properties, e.g. improved cold, heat or drought tolerance, to herbicides, extreme osmotic conditions, pathogens or pests, increased resistance to plant disease, better growth rate by modification of the conditions are conditionally increased rate of the conditions are conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches
of the cell cycle pathway with plant growth regulators, increased rate of homologous recombination, modified seed oil or protein yield and/or content, improved yield by modification of carbohydrate, nitrogen or phosphorus use and/or uptake, by modification of photosynthesis or by providing improved plant growth and development under at least one stress condition, improved lignin production or improved galactomannan production. This sequence represents a bacterial polypoptide used in the scope of the invention. Note: The sequence data for this patent did not
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      pathogen tolerance; pest tolerance; plant disease resistance;
